

# Fertilizer Broadcaster

**SHAKTIMAN** Fertilizer Broadcaster is a modern technology implement designed to spread fertilizers with greater ease and efficiency. While the traditional method of spreading fertilizers with hands was more laborious, time consuming and health hazardous, this modern method designed by us is less time consuming and more comfortable and also it does not present any threat to health. It can spread fertilizers in large portions of land in real time.

They can spread the fertilizer fall on 12 to 14 meter width in field. Their unique distributing system ensures uniform spreading of fertilizers over greater distances. The gear box absorbs sudden changes in power and keeps the machine safe. The opening system with independent levers allows the operator to choose to spread the fertilizer only where it is required.

## Advantages

- It allows the operator to spread fertilizers in larger land portion in lesser time.
- It promises uniform spreading of fertilizers which improves organic structure of the land.
- Faster operation saves time and power consumption.
- Its 17 teeth gears stabilize the impact of sudden power change and safeguard the machine.

## Fertilizer Broadcaster

<b>Model</b>		<b>S-500</b>	
Capacity	litres	345	
Fertilizer Broadcaster Height	inch/mm	44.5 / 1130	
Weight	Kg/lbs	67 / 148	
Spreading Width	Granular	inch	472.4-551.2
		mm	12000-14000
	Crystalline	inch	236.2-275.6
		mm	6000-7000
PTO		1" 3/8	
Transmission		1:1	
Absorbed Power at 540 RPM		8HP / 6kW (& above)	
Hopper Width	inch/mm	46.1 / 1170
